

# Development Days/Courses

Aydin's Academy classes on universities, programs, and study skills.

Beyond advising, I put a huge value on students completely understanding the university system here in the states. There are numerous classes every single year on majors, career counseling, university selection, applying to internships, starting research, launching non-profits, creating resumes/CVs, mock interviews, financing a university education, applying to scholarships as early as junior year, and more.

## Professional skills

When going to a top university, students are expected to have a very practical foundation in the field they are going into. The required certifications and experience. There are going to be several programs that will certify each student in areas that they are passionate about. I understand for example if your son/daughter is interested in his/her story, maybe even economics, we will definitely be giving his/her exposure to those things!

## Awards

Every student needs to have a minimum of 6 awards and 10 extracurricular activities they have participated and achieved by application time. Advising on which competitions balance difficulty and prestige is key.

## Incredible applications

We start as early as the summer of Junior year to start applying to universities. Students have 6 hours a week with me to ensure their applications stand out from the tens of thousands of othis/her cookie cutter applications through my college essay curriculum. I grade and edit each essay to make sure students have essays that seem tailored for the universities they apply to.

## Here are just a few references should you like to contact them!
